Department of Information Technology & Engineering

Session 2024-25

**Project Title :** Online Skill Test for Every Sector and Every Level of Skill.

**Abstract:**

The E-Learning Resource Locator Learning Management System (LMS) is designed to simplify and enhance the process of discovering and accessing educational resources within an online learning environment.

This system integrates various e-learning tools and resources into a unified platform, allowing students and educators to efficiently search, filter, and retrieve content relevant to their courses and academic interests.

The LMS employs advanced algorithms to recommend personalized learning materials, ensuring users receive content tailored to their progress and learning preferences. Additionally, the system offers real-time updates, collaboration features, and analytics to track engagement and performance.

By streamlining resource location and management, this LMS aims to improve the overall learning experience, foster collaboration, and support continuous learner development.
